Hello, XM satellite radio offers broadcasts that I cannot get when I am traveling out of my area or out of state. There is no reason to reduce free enterprise because a group of people want to decide what to tell us to do. I want you to reject the NAB's petition 04-160 because it takes away a type of radio system that I am not able to receive elsewhere.

I am willing to pay for this service so why is it a concern for the FCC?

Do not let groups or lobbyists determine what type of radio we are able to listen too!

Free speech & communication are vitally important.

Sincerely, Kevin Murphy
